RAJ

AI & Data Engineer

+91-9958262272 · rajshrivastav283815@gmail.com · LinkedIn · GitHub · Portfolio

Computer Science student specializing in autonomous agentic workflows, predictive modeling, and data engineering. Builds production-ready ML pipelines (scikit-learn, pandas), deploys local LLMs (Ollama, Groq), and designs event-driven architectures (Neo4j, FastAPI). **SIH ’25 Grand Finale Runner-Up** · 7× national hackathon finalist · 2× winner, with a track record of turning raw datasets into explainable, deterministic AI systems.

TECHNICAL SKILLS

Languages	Python, SQL, TypeScript, JavaScript, C++
AI, ML & Data Science	scikit-learn, pandas, TensorFlow, PyTorch, Neo4j (Knowledge Graphs), Deepgram, vector databases, statistical modeling
LLM Ecosystems	Gemini 3.0, Llama 3.3, Groq, Ollama, LangChain, autonomous agent orchestration
Backend & DevOps	Node.js, FastAPI, PostgreSQL, Redis, Docker, Git, Google Cloud
Frontend (secondary)	React.js, Next.js, Tailwind CSS

PROJECTS

BTP Event-Driven Congestion Planner — Machine Learning & Predictive Modeling

Flipkart Gridlock Hackathon 2.0 · Built with Bengaluru Traffic Police

Python · scikit-learn · pandas · Streamlit

- Engineered an AI-assisted forecasting pipeline (scikit-learn, pandas) with a 4-tier explainable fallback mechanism to predict traffic impact and recommend police deployments from ASTRAM incident logs, correcting administrative lag in sparse data.
- Validated on chronological, leakage-free splits with a deterministic feature-engineering pipeline — the rule-based model hit a 0.4906 macro-F1 score, beating a RandomForest classifier's recall on imbalanced severity classes.

ThreatGraph: Autonomous Agentic SOC — AI Engineering & Graph Databases

Splunk Agentic Ops Hackathon · Security Track

Node.js · Neo4j · Splunk MCP

- Architected an event-driven, multi-agent SOC detecting and remediating distributed cyber threats in under 2 minutes (vs. 4+ hrs manual triage), backed by a persistent Neo4j Campaign Knowledge Graph for deterministic severity escalation.
- Built a 5-agent pipeline — a Commander Agent queries Splunk via MCP (~300-token context) and orchestrates parallel remediation across Identity, Network, and Infra agents, executing up to 22 automated actions per incident with human-in-the-loop approval.

SEO Command Center — Data Engineering & Local AI

Autonomous Audit Engine

Python · pandas · Ollama · difflib

- Built an offline data engine (pandas) ingesting Screaming Frog CSV exports and running 17 deterministic rules for automated technical audits in under 60 seconds.
- Implemented a local Ollama LLM pipeline (Qwen3.5/Gemma4) with a self-healing, pixel-width validation loop for meta-titles, plus a pure-Python redirect mapper (difflib) resolving 404s without LLM hallucinations.

WardWatch AI — Hyper-Local Pollution Dashboard

Live Demo ·

National Hackathon Finalist · Top 30, 2025

React · TypeScript · FastAPI · TensorFlow · Google Cloud

- Deployed a Multi-Layer Perceptron (MLP) image verifier (TensorFlow, 10K+ images) filtering citizen pollution reports with zero false positives.
- Built dual platforms serving 30M citizens and government officers — 272-ward GIS heatmaps, real-time AQI alerts, and an AI policy simulator (FastAPI) for DPCC officers.

EDUCATION

B.Tech Computer Science & Engineering — Delhi Technological University (DTU) Aug 2023 – May 2027

CGPA: 7.642 · Class XII (CBSE): 89% · Class X (CBSE): 91%

ACHIEVEMENTS & EXTRA-CURRICULAR

Hackathons	7× National Finalist · 2× Winner — SIH ’25 Grand Finale Runner-Up, SIH ’24 Internal Winner; Finalist at SynapHack, StartUp SpotLight E-Summit, 10+ national events (15+ competitions).
